

New versions of Java have caused problems with the sound. To get the sound from the service you must adjust your Java security.

Make sure your Java is up to date and then locate the Java folder

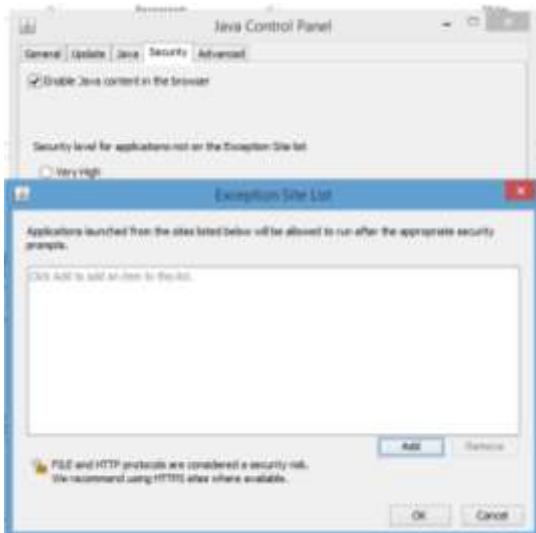

Open Java Console

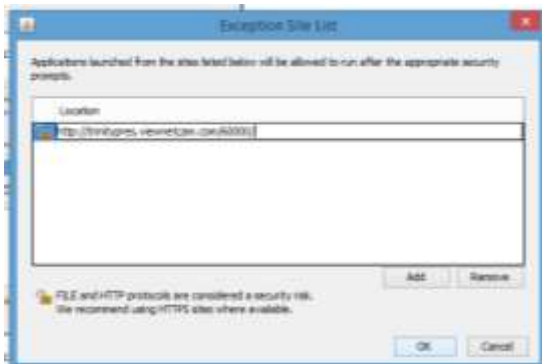

Click on the security tab

Click on edit site list

Click add and type in the address of the netcam <http://trinitypres.viewnetcam.com/60000/>

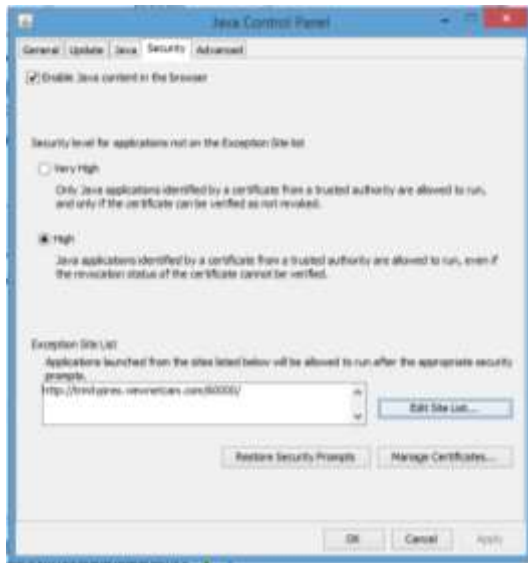

Click ok

On the next screen click on Continue to accept the location

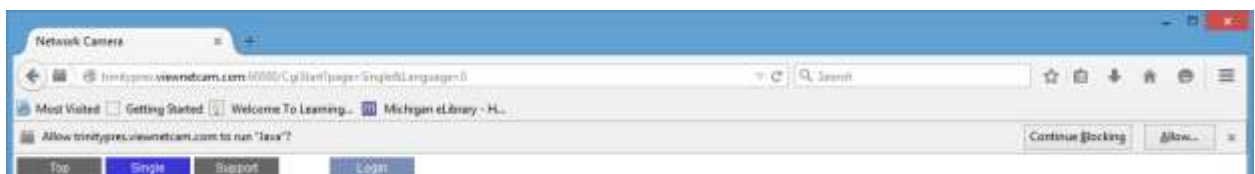

Click ok to close Java Console

Restart your browser

When you start the netcam you will get a message just under the address bar and click on allow

Click on allow and remember

Click on I accept the risk

Your sound should begin in just a few seconds
